## ON BOARD

### BARRACUDA YACHT DESIGN

► Only in the gargantuan world of explorer yachts could a 50m be considered a pocket yacht, but this is exactly how Spanish naval architect Barracuda Yacht Design has described its latest creation. Would-be adventurers will surely

be drawn to the exploration deck, which provides storage space for a sailing yacht, personal submersible and off-road car as well as the main tender, while the upper deck features the now-compulsory helipad. [barracuda-yd.com](http://barracuda-yd.com)

### MALCOLM MCKEON YACHT DESIGN

► Drawing on the experience of designing the 33m sloop *Missy* for Dutch yard Vitters, Malcolm McKeon has set his sights even higher for this new project. MM51 borrows the glass canopy idea from *Missy* and adds a floodable foredeck tender garage, which can double up as an onboard pool. The lifting keel makes this 51m sailing yacht an ideal shallow-waters cruiser. Pre-engineering has begun in collaboration with an unnamed shipyard, meaning this project could be fully realised by late 2018. [malcolmmckeonyacht.com](http://malcolmmckeonyacht.com)

### ANDY WAUGH YACHT DESIGN

► It's not just the striking exterior design that emphasises the connection between the decks on this concept. *Ascendance* has been designed around a spectacular staircase, which will link the owner's deck to the eight guest cabins on the main deck. There's plenty to get excited about on the exterior as well, such as a waterfall-fed swimming pool on the aft deck and an intimate fire pit on the sundeck. Based on a proven Nobiskrug platform, this 111m yacht would be fitted with a hybrid bio-diesel/electric drivetrain for greater efficiency and lower vibration and noise levels. ## THE DRAWING BOARD

From exciting new explorers and stunning sailers to sleek and classy cruisers, these are the concepts that caught our eye this month

### JFA YACHTS

Exploring remote destinations with low environmental impact is the *raison d'être* of French yard JFA Yachts' new 38m concept, *Arcana*. Developed with Hansen Marine Exploration and Horacio Bozzo, of Axis Group Yacht Design, this rugged design will be propelled by a diesel-electric powertrain for a top speed of 13 knots and a range of 4,000nm at 10 knots. *Arcana* will also be able to launch a three-person submersible.
