Kingship And Barracuda Yacht Design To Build 120ft Sailing Yacht

Published: Tuesday, 07 October 2014

Hong Kong-based shipyard Kingship is collaborating with Spanish yacht design company Barracuda to create a 120ft flybridge sailing yacht. The yacht is being built for an experienced owner looking for an unpretentious deckhouse cruising yacht with lots of room inside.

The emphasis is on safe and relaxing cruising, with guests free to enjoy un-cluttered deck areas, including a large aft deck lounge, wide side decks and a simplified foredeck.

Guests will appreciate the extra degree of privacy on the flybridge. The yacht's sailing controls, dining and sunbathing areas are also located here.

A bright and airy deckhouse allows guests to enjoy a stunning 360° view.

There are four large and luxurious guest cabins and a day head within easy access of the central lobby.

A generous sail area, including a self-tacking inner jib, large genoa and gennaker matched with an easily driven hull, high-aspect balanced rudder and lifting centreboard combine to provide high speed when desired.
