

## MENGI YAY YACHTS - 31m AND 40m CONCEPTS WITH UNIVERSAL APPEAL

WITH TURKEY'S INCREASED REPUTATION FOR BUILDING QUALITY YACHTS IN ALUMINIUM, WE WERE ONLY TOO PLEASED WHEN TUZLA BASED MENGI YAY YACHTS CAME TO US ASKING FOR DESIGN CONCEPTS FOR BOTH 31m AND 40m SAILING YACHTS.

The brief insisted upon universal appeal - well-balanced, aluminium hulls that would transcend short-term fashion and survive the test of time.

### 40m SY

These had to be practical designs that could be built in a relatively uncomplicated and cost-competitive way. To this end we included many symmetrical shape rooms - cabins, for example, that could easily be transformed from doubles to twins and back again.

Both designs share a number of common attributes including, for example, maximum waterline length hulls, balanced rudders and deep bulb keels with variable draft centreboards. Both have full carbon rigs, flexible sail plans including a self-tacking jib, large overlapping genoa and furling boom.

#### Mengi Yay 40m:

Elongated with an unobtrusive deck-saloon, the 40m needs little in the way of optical illusion to convince you this is an impressive, sleek looking yacht, with lots of available space. Signature interior feature of this design is the full-beam width owner's suite - with patio-doors for access to a private terrace and swim platform.

#### Mengi Yay 31m:

The impression of the 31m is that a lot of useable space has been created in comparison to overall length.

Three guest cabins (in addition to the owner's suite), is unusual for a yacht of this size and was included due to an unprecedented number of requests from owners of similar length yachts with only two available guest cabins.

Another example can be found within the owner's suite, where instead of using conventional doors to access the en-suite bathroom, we made this an open walk through to a vanity area - giving the impression the owner's room is a much larger space than it actually is.
